EDUCATION

General Santos City, PH **Holy Trinity College of General Santos City** **2019 - 2023**

- **Degree:** Bachelor of Science in Computer Engineering
- **Certificate:** Electronic Product Assembly and Servicing NC II (2024)
- **Relevant Training:** SQL Server, Python & Advance Power BI Training (I-MERGE, 2026); Mastering Power BI (Trainocate PH, 2025); n8n Courses

EMPLOYMENT

Data Engineer / Analyst **Brigada Distributions Inc.** **January 2024 - March 2026**

Barangay San Isidro, General Santos City, Philippines

- Built production data pipelines, analytics systems, and automation workflows across real business operations.
- Developed Power BI dashboards and reporting systems supporting data-driven decisions company-wide.
- Designed n8n and Power Automate workflows (data consolidation with AI column correction, waybill PDF extraction, dataset refresh monitoring, hybrid AI sales forecasting) eliminating manual operations across teams.
- Leveraged knowledge in SQL Server, Python, Power BI, n8n, Power Automate, and API/webhook integrations.

SOFTWARE PROJECTS

Personal Website: https://jayveecanlas8686-pixel.github.io/portfolio/ (for additional information and projects)

Azure E-Commerce ETL Pipeline

- Developed a production-grade ETL pipeline ingesting e-commerce data from a REST API through a Bronze → Silver → Gold medallion architecture on ADLS Gen2, serving analytics-ready tables via Synapse.
- Utilized: Python, Apache Airflow, dbt, ADLS Gen2, Azure Synapse

Azure Real-Time Stock Pipeline

- Ingested live stock ticks via Azure Event Hubs, computed OHLCV micro-batch aggregations with technical indicators (SMA, RSI, Bollinger Bands); infrastructure reproducible via Terraform, monitored with Prometheus/Grafana.
- Utilized: Python, Azure Event Hubs, Synapse, Terraform, Prometheus, Grafana

Azure Data Quality Framework

- Created a reusable data quality framework where every table runs a daily expectation suite, results persist for trending, and failures trigger immediate Microsoft Teams alerts.
- Utilized: Python, Great Expectations, Apache Airflow, Azure Synapse

AUTOMATION PROJECTS

AI Email Builder *(https://nestmarketing-emailbuilder.com/)*

- Built an internal tool for a marketing agency running a full AI pipeline — brand research, on-brand copywriting, HTML email design with a self-critique render loop, and AI-restaged product photography — exporting finished emails as editable Figma files; expanded into an agency-ops dashboard with task review and analytics.
- Utilized: Claude API, Figma API, Puppeteer, Socket.io, Supabase

AI Sales Forecast (Hybrid ML + AI Ensemble)

- Daily workflow pulling multi-year SQL revenue, product, seasonality, and discount data enriched with PH holidays; blends a LightGBM model with a Gemini AI forecasting agent into a weighted hybrid ensemble that outputs an automated daily forecast report.
- Utilized: n8n, SQL Server, LightGBM, Gemini AI

Consolidate Raw Collection Data

- Detects new files in OneDrive, extracts raw collection data, and compares incoming columns against the target Excel structure; an AI step flags and corrects renamed or invalid columns before appending cleaned records, removing manual column-checking.
- Utilized: n8n, OneDrive, AI, Excel

SKILLS

- **Data & Analytics:** SQL Server, PostgreSQL, Power BI, Apache Airflow, dbt, Great Expectations, Azure (Synapse, ADLS Gen2, Event Hubs), Prometheus, Grafana
- **Automation & AI:** n8n, Power Automate, API Integrations, Webhooks, Microsoft Graph, LightGBM, Claude API, Gemini AI, Puppeteer
- **Development:** Python, JavaScript, TypeScript, PHP, Node.js, Express.js, React.js, Vite, Tailwind CSS v4, Docker, Terraform, Git/GitHub, Supabase
